

## Weight of 1968 42 Commander

Posted by michael muir on September 21, 2020 at 12:38pm

I am looking to buy a lift for my 42 Commander in the spec dry weight is 22443-25621. Does anybody know why the variance or what the correct weight is?

Thanks

With CC427 gas engines = 22,443 lbs;

With Detroit Diesel 8V53N engines = 25,621 lbs.

Each diesel was heavier by over 1400 lbs EACH over the gas engines making that over 2800 lbs. total, hence the above difference. The difference between full fuel from gasoline to diesel fuel was approx. roughly 250 lbs. Don't forget in difference in weight for the generators since the diesel version was about 325 lbs more over the gas version.
